

## **CHAPTER 3**

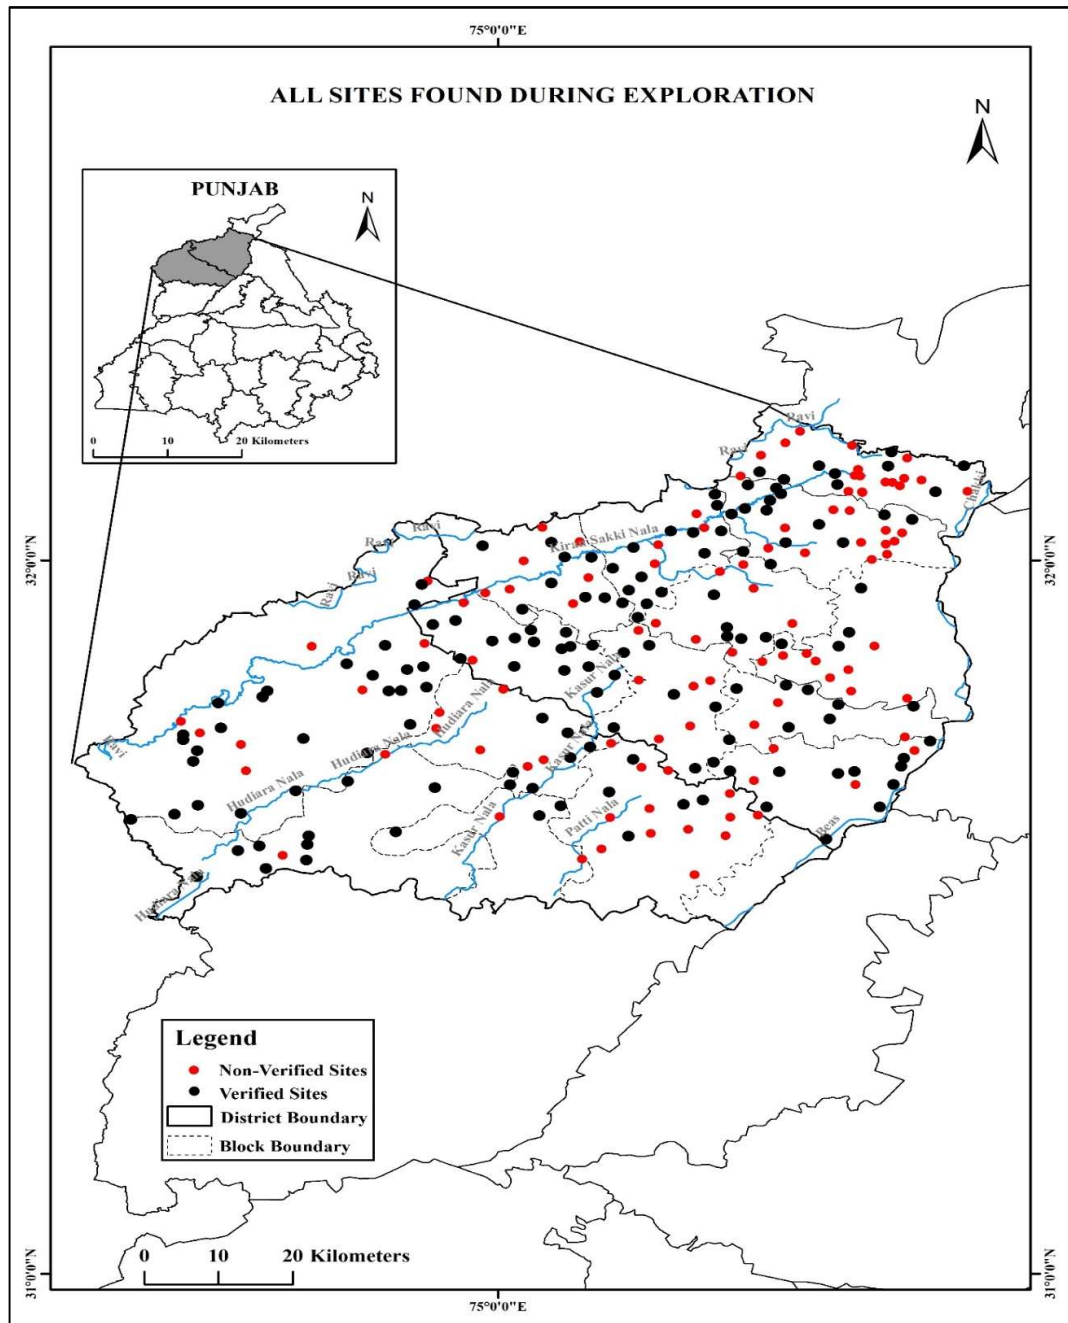

### **EXPLORED ARCHAEOLOGICAL SITES**

In this study, a detailed village-to-village survey was conducted to gather first-hand information about the archaeological sites in the study area of districts Amritsar and Gurdaspur in December 2022, October 2023, December 2023, April, and May 2024. During the course of the study, the material inventory of ceramics, figurines, and other terracotta objects were thoroughly examined to provide a culture sequence of the explored sites. As a result of the survey, two hundred and fifty nine sites were found, but out of these, the cultural sequence could be established for only one hundred and forty seven sites and out of these, forty six sites have been reported before including monuments. Out of the one hundred and one newly found sites, twenty one included structures showcasing mostly medieval or later features without any ceramic assemblage to identify the culture. The following culture sequence was established in the study region based on ceramic analysis in the present study:

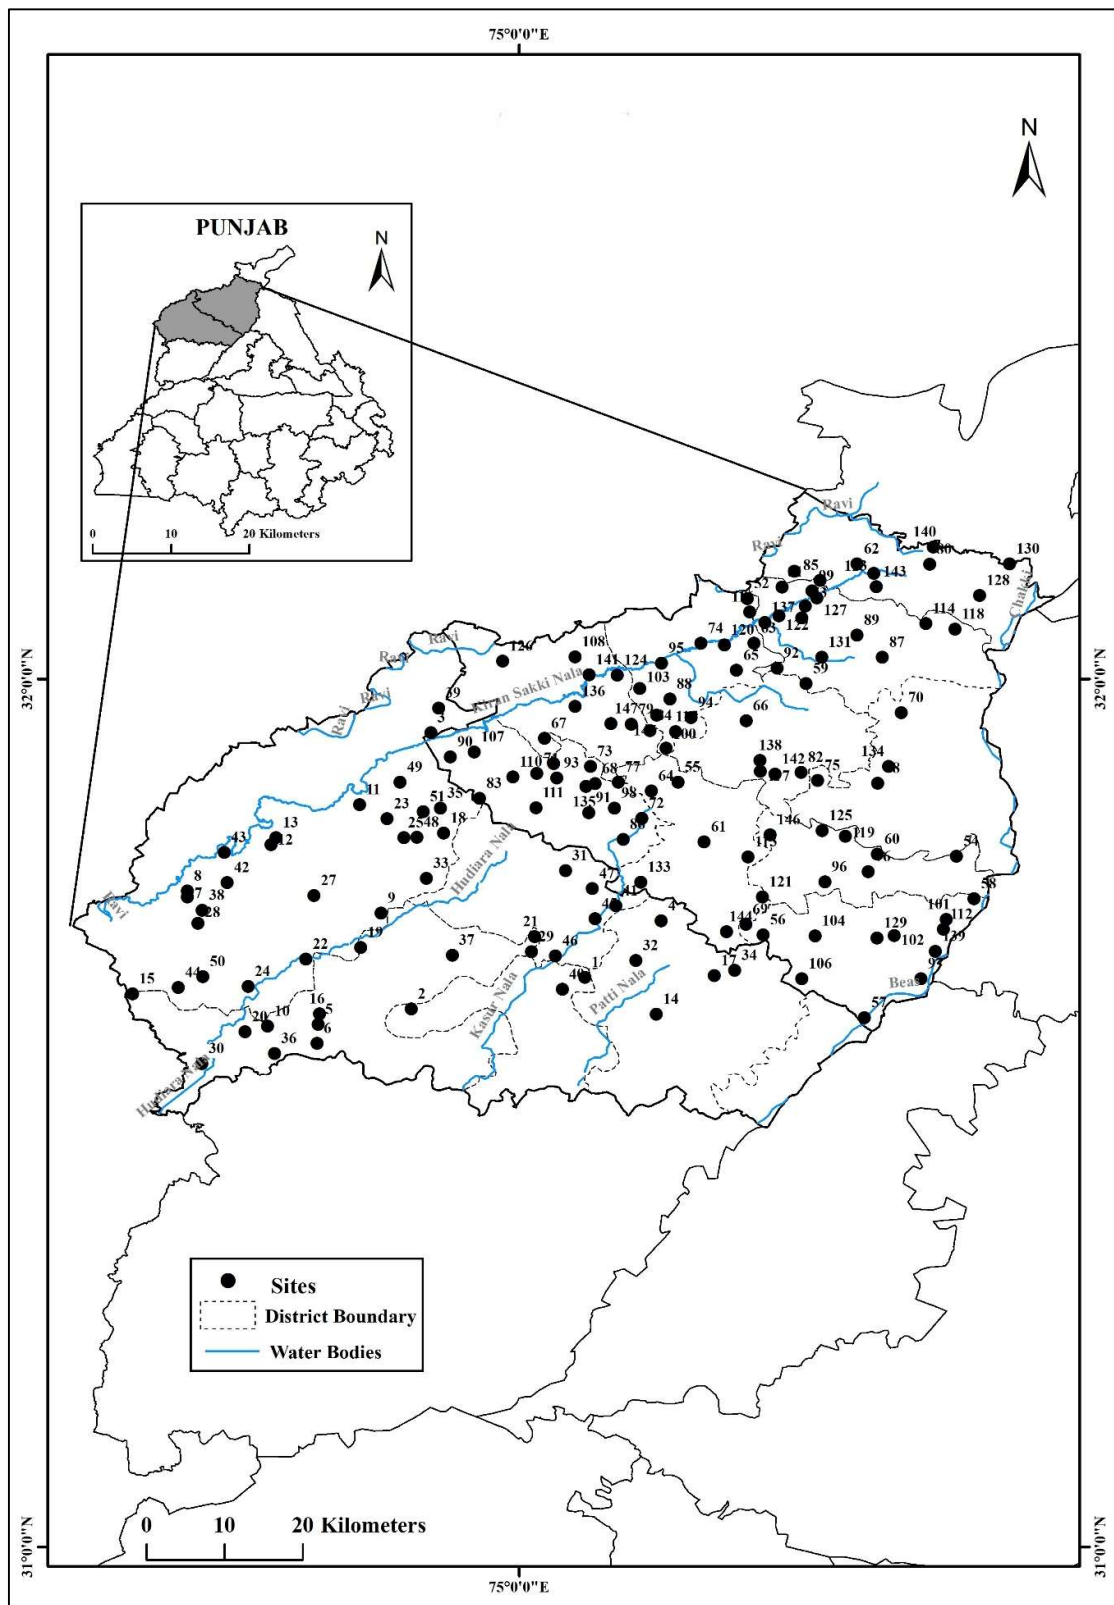

- Early Historical period (600 BCE -300 CE)
- Historical period (300 CE- 600 CE)
- Early Medieval period (600 CE- 1200 CE)
- Medieval period (1200 CE – 1800 CE)

Early Historical sites were twenty one in total, all continuing into the Historical period and thirteen continuing into the Early Medieval period. These were Hardo Putli, Kaulowal, Lalla Afgana, Mattewal and Urdhan in district Amritsar and Bikhariwal, Hardowal, Kala Gorey, Kandila, Loharranwala, Mann Sandwal, Seera and Wadala Granthian in district Gurdaspur. Lalla Afgana continued into the Medieval period as well. The total number of sites with historical pottery was sixty seven, out of which forty one continued into the Early Medieval period. The total number of Early Medieval sites is eighty nine. Only one site, Lalla Afgana in Amritsar also known as Chinna da Theh or Chinapati was dated to the Medieval period based on pottery i.e glazed ware. The study area consists of cities like Batala, Kalanaur, Dera Baba Nanak, Gurdaspur, Amritsar, Qadian, Sri Hargobindpur and Dinanagar that have historical importance. They also contain monuments that are protected by the Archaeological Survey of India like Takht-i-Akbari in Kalanaur, Pun Kanjri in Attari, Ram Bagh and Sri Harmandir Sahib in Amritsar, Shamsheer Khan's tomb and Anarkali Baradari in Batala. These establish the cultural chronology of the cities to the medieval period. Other monuments like Qila Jagatpur in Jagatpur Bajaj, Dargah of Hazrat Shah Badar Diwan Qadri Baghdadi at Massanian Sharif, Makan Sharif at Rattar Chhattar, Pandori Dham at Pandori are not protected monuments but nevertheless help in establishing the culture sequence in the absence of pottery. Other structures

include ruins of buildings, mosques, minarets etc., many of these were made of lakhori bricks that were widely used during and after the medieval period, so these structures will be given a tentative attribution to the medieval period in the absence of any other evidence. There are thirty eight sites that were attributed to the medieval period based on structural evidence and one, Lalla Afgana that provided ceramic evidence. The tentative medieval period includes a broader time span that extends into the modern period.

**Figure 3.1:** Map of all sites found during the fieldwork. (Courtesy: Abhishek Malik, Department of Geography, Panjab University, Chandigarh)

**Figure 3.2:** Map of verified sites found during the fieldwork. (Courtesy: Abhishek Malik, Department of Geography, Panjab University, Chandigarh)

As part of the survey, all previously reported sites were also explored. Out of these, some sites (Table 3.1) were not found, some sites (Table 3.2) were found, but as the mounds had been built over, no pottery could be retrieved to establish the culture sequence. Only twenty eight of the previously reported sites were found in the present study that included pottery for cultural analysis (Table 3.3). The names of many of these sites have changed over time, and the cultural sequence also turned out differently for many of them. In the previous surveys conducted by Joshi et al., Joshi, Madhu Bala and Chakravarti and Saini, a total of eighteen sites were reported as Harappan or Late Harappan in the region, but in the present study, no site with Harappan pottery was discovered, the earliest habitation goes back to the early historical period<sup>1</sup>.

**Table 3.1:** List of previously reported sites that were not found during the current exploration conducted by the author. (GW- Grey ware, BSW- Black Slipped ware, RW- Red ware, LH- Late Harappan, BW- Black ware, PGW- Painted Grey ware, E His- Early Historic, Med- Medieval)

| S. No | Year    | Reported by  | Site              | Culture Sequence     |

Details of each site found in the current study is discussed below.

## EXPLORED SITES IN DISTRICT AMRITSAR

### 1. Akalgarh: 31.655778, 75.076012

It is in Tarsikka block, 6.1 km northwest of it and 21.3 km east of Amritsar on NH 503 A. The village lies south of the NH 503 A but the site lies north of the highway, 600 m northwest of the village. The site is 0.8 ha in size (see Appendix A, 1, p 214). Typical historical pottery including GW and spouted pottery was found here.

### 2. Amritsar: 31.619617, 74.876040

The city of Amritsar is said to have been laid down by the Sikh Guru Ram Das in 1577. The construction of the Harmandir Sahib or the Golden Temple is said to have started in 1581. The area around the Harmandir Sahib appears to be on a mound and is likely the oldest part of the city. Ram Bagh is a garden built during the reign on Maharaja Ranjit Singh. The garden

complex also consists of monuments like the summer palace, hammam etc. It was built in 1831. It is a protected monument. It has been attributed to the medieval period. The total area of Amritsar that would have been a medieval settlement is 750 ha including the walled city surrounding Sri Harmandir Sahib, Ram Bagh and Gobindgarh Fort.

**3. Awan near Ramdas:** 31.93793, 74.89876

This site is in Ajnala block, 21.2 km from it and 39.5 km from Amritsar. The site is 1.5 km to the southeast of Awan near Ramdas in the middle of agricultural fields (see Appendix A, 2, p 214). The site is elevated to 233m and spread across 3.2 ha. Part of the mound is intact and rises to 6m. The soil is sandy. Early medieval pottery like the knife edged bowls were found here. Peer Baba's temple is built on top of the mound. Ravi flows to 6.18 km to the northwest of this site. It is located 3.7 km northwest of Hardowal.

**4. Bagga:** 31.72132, 75.16393

The site is in Tarsikka block, 13.1 km from it and 33.2 km from Amritsar. The village is on the Kotli Dhole Shah-Udhoke road, 2.4km southwest of Udhoke. The site is 400m to the east of Bagga. The elevation is 245m. The mound is partly intact and spread across 4 ha and is 9 m tall. The soil is mix. Typical Early Medieval pottery like knife edged bowl were found here. A temple of Peer Baba is built on top of the mound. Modern bank of Beas is 29.5 km to the east.

**Figure 3.3:** View of mound at Bagga

**5. Bhasarke Bhaini:** 31.60189, 74.76898

The village is in Attari block, 21.9km from it and 16.1km from Amritsar. The village can be reached from the GT road, going south from Punjab State War Heroes' Memorial and Museum.

The site is 1.1km southwest of the village. The elevation is 229 m and the mound is intact with a Peer Baba on top. The size of the site is 5.2 ha and the height is 7m (see Appendix A, 4, p 215). The pottery includes Black Slipped Ware and other typical Historical wares like the incurved bowls. The international border with Pakistan is 17.3km to the west.

**6. Bhasarke Gillian:** 31.58001, 74.76758

The site is in Attari block, 13.1 km southeast of it and 10.2 km southwest of Amritsar. Its located 2.4 km south of the site of Bhasarke Bhaini. The size is 0.8 ha, and the mound has been mostly removed to build Bhai Gurdas Govt. School (see Appendix A, 5, p 216). Pottery found includes typical Kushana wares like knobbed pottery and Historical pottery like incurved bowls.

**7. Bhillowal Pakka I:** 31.748675, 74.618505

The village lies in Chogawan block, 7.5 km from it and 30.2 km from Amritsar. The international border with Pakistan is 6.7 km to the west and the modern bank of Ravi is 8.4 km to the west. 110 m south of the village, there are 2 structures with Lakhori bricks now in ruins. There is evidence of a medieval well near it. However the well is mostly destroyed and covered. No pottery was found here.

**Figure 3.4:** View of structure at Bhillowal Pakka I

**8. Bhillowal Pakka II:** 31.755385, 74.618358

The village lies in Chogawan block, 7.5 km from it and 30.2 km from Amritsar. The international border with Pakistan is 6.7 km to the west and the modern bank of Ravi is 8.4 km

to the west. 300 m north of the village and 700 m north of Bhillowal Pakka I, there are remains of two structures, one on each side of the road. On the left, the structure has been painted over and converted into a temple which is not functioning anymore. Smaller bricks are exposed in certain areas and a few date palms can be seen around it. On the other side a bigger structure made from Lakhori bricks is hidden between date palms (see Appendix A, 7, p 217).

**9. Bua Nangli:** 31.73022, 74.84134

This site is in Harse Chhina block, 8.7 km from it and 13.1 km from Amritsar. The village can be reached from NH 354, taking right to Adilwala, Nua Nangali is the next village. The mound has been removed but the site is spread across 0.8 ha (see Appendix A, 8 p 217). The soil is alluvial. Historical incurved bowls were found here. Peer Baba's shrine has been built on the top.

**10. Chak Mukund:** 31.59961, 74.71066

The site is in Attari block, 14.8 km from it and 20.2 km from Amritsar on GT road. The site is 1.3 km to the southwest of the village. The elevation is 218m. The site is spread across 1.6 ha and has been levelled to 0m (see Appendix A, 9, p 218). The soil is sandy. Historical pottery and early medieval knife edged bowls were found here. A well with Lakhori bricks was also found here. It is 5.5 km west of Bhasrake Bhaini.

**11. Chamyari:** 31.85522, 74.81665

The site is in Ajnala block, 4.8 km northeast it and 31.2 km from Amritsar on Ajnala- Fatehgarh Churian road. The mound is partly intact and spread across 0.8 ha. The height rises to 5m (see Appendix A, 10, p 218). Historical pottery like incurved bowls was found here.

**12. Chhina Karam Singh I:** 31.809046, 74.714586

The village is in Harse Chhina block, 9.1 km northwest from it and 29 km from Amritsar. The international border with Pakistan and the modern bank of Ravi lies 13.5 km to the west. On the road between Chhina Karam Singh and Jastarwal, 200 m south of Chhina Karam Singh a well made of lakhori bricks was found with an inscription (see Appendix A, 11, p 219). The site is spread across 2 ha and early medieval pottery was also found along with a terracotta ball.

**13. Chhina Karam Singh II:** 31.817007, 74.720436

The village is in Harse Chhina block, 9.1 km northwest from it. The international border with Pakistan and the modern bank of Ravi lies 13.5 km to the west. 500 m northwest of the village lies a structure made of lakhori bricks in ruins. It is in the middle of agricultural fields next to the road going north from the village. According to the locals, the structure is called Baradari and was used by the British officials as a regional office when collecting tax.

**Figure 3.5:** View of structure at Chhina Karam Singh II

**14. Dehriwal:** 31.61364, 75.15846

The village is in Tarsikka block, 3.8 km from it and 35.2 km from Amritsar on the NH 503 A Sri Hargobindpur road. Situated at an elevation of 229m, the site covers 2.4 ha with a mound height of 4m. The soil is alluvial, and the village is built on top of the mound (see Appendix A, 12, p 219). Historical and early medieval pottery was found. It is 8.1 km southwest of Guhatwind Hinduan.

**15. Dhanoya Kalan:** 31.637088, 74.555189

It is in Attari block, 5.6 km from it and 35.2 km from Amritsar north of the G T road. The site lies 800 m west of the village. The site is a monument locally known as Pul Kanjri or Pul Moran. It is 700 m east of the international border with Pakistan. It was built by Maharaja Ranjit Singh and is a protected monument (see Appendix A, 13, p 220).

**16. Ghumanpura:** 31.61404, 74.77064

It is in Verka block, 15.9 km from it and 8.1 km from Amritsar on the GT road. It is located 1.3 km north of Bhasarke Bhaini. Located at an elevation of 229m, the site spans 0.8 ha with a

mound height of 1m (see Appendix A, 14, p 220). The soil is sandy, and the mound is mostly removed. Early medieval pottery like knife edged bowls was found here.

**17. Guhatwind Hinduan:** 31.65817, 75.22516

The village is in Rayya block, 16.1 km from it and 39.3 km from Amritsar. It can be reached from the NH 503A Sri Hargobindpur road. Positioned at an elevation of 243m, the site covers 2.4 ha with a mound height of 2m. The soil is a mix, and the village is built on top of the mound with certain areas exposed (see Appendix A, 15, p 221). A Shiv temple is also built on the mound. The area of the mound hosts a local fair once a year. Historical pottery was found. Beas can be found 15.9 km southeast of it.

**18. Hardo Putli:** 31.82240, 74.91338

The village is in Ajnala block, 20.1 km from it and 27.2 km from Amritsar. The village is located on the Amritsar- Sangatpur- Fatehgarh Churian road. The site is 400 m to the north of the village. Situated at an elevation of 236m, the site spans 3.2 ha with a mound height of 4 m. The soil is alluvial, and the mound is partly intact. Typical historical pottery along with Black Slipped ware and early medieval pottery was found here. Arecanut shaped bead was also found.

**Figure 3.6:** View of mound at Hardo Putli

**19. Heir:** 31.69046, 74.81790

It is in Verka block, at 11.1 km to the northwest of it and 7 km from Amritsar on NH 354. Located at an elevation of 224 m, the site covers 2 ha with a mound height of 5 m. The soil is sandy, and the mound is mostly removed to build a colony (see Appendix A, 17, p 222). Early medieval pottery was found here.

**20. Hoshiar Nahar:** 31.591232, 74.685735

The village is in Attari block, 2.7 km southeast of Gharinda on the G T road. It is 7.5 km east of Attari and 17.7 km west of Amritsar. The international border with Pakistan is 10.1 km to the west. There are two structures in ruins with lakhori bricks. It appears to be a ruined mosque that was renovated or built over but lakhori bricks can be seen in some parts. In the agricultural fields there is a foundation of a rectangular structure with similar bricks. It appears to be a reservoir in which agriculture is now practised.

**21. Jagatpur Bajaj:** 31.70293, 75.01835

It is in Majitha block, 7.9 km east of it and 15.2 km northeast of Amritsar on NH 54 Batala-Anritsar road. Within the village there are ruins of a fort that the locals say dates to Maharaja Ranjit Singh (see Appendix A, 18, p 222).

**22. Kaler:** 31.6772, 74.7548

It is located in Chogawan block on the Ram Tirth road. It is the located inside the temple complex of ram Tirth. It is a tank build with medieval bricks.

**23. Kamalpura:** 31.83903, 74.84827

It is in Ajnala block, 12.2 km from it and 27.7 km from Amritsar. The site is in the outskirts of the village. Positioned at an elevation of 235m, the site spans 0.8 ha with a mound height of 3m. The soil is red, and a Peer Baba structure is built on top of the mound (see Appendix A, 19, p 222). Historical and early medieval pottery was found here. It is 4.01 km to the west from Wachhoa.

**24. Kaulowal:** 31.64559, 74.68825

It is in Chogawan block, 6.9 km to the southeast and 16.5 km from Amritsar. The site is 600 m to the east of the village. Situated at an elevation of 221m, the site covers 1.2 ha with a mound height of 5m. The soil is a mix, and structures are built on top of the mound. Historical and early medieval pottery was found here along with bowls depicting a transitional late historical phase. It is 2.9 km to the southwest of Khiala Kalan.

**Figure 3.7:** View of mound at Kaulowal

**25. Khatrai Kalan:** 31.81706, 74.86775

The village is in Ajnala block, 12.1 km from it and 24.2 km from Amritsar. It is 1.42 km west of Talwandi Sepahimal. Located at an elevation of 245 m, the site spans 3.2 ha with a mound height of 4m. The village is built on top of the mound and the highest part of the mound is exposed along with ruined structures with medieval bricks (see Appendix A, 20, p 223). Early medieval pottery was collected from the site during exploration.

**26. Khiala Kalan:** 31.65224, 74.71334

It is in Chogawan block, 9.8 km from it and 21.1 km from Amritsar. The site lies 1.3 km south of the village. Positioned at an elevation of 224m, the site covers 1.6 ha with a mound height of 2m. The soil is Mera, and structures are built on top of the mound (see Appendix A, 21, p 224). Early medieval pottery was found here.

**27. Lalla Afgana:** 31.75016, 74.76431

The site is locally known as Chinna da Theh. It is in Harse Chhina block and is located 1.1 km northwest from it and 18.1 km from Amritsar. Harse Chhina is located on NH 354, Amritsar-Ajnala Road. The mound is visible on the left, travelling north from Amritsar. The village used to be part of Harse Chhina and was separated recently into village Lalla Afgana. The mound is located 900 m from the village to the southwest and can be reached from Harse Chhina- Othian link road. Situated at an elevation of 229m, the site spans 10 ha with a mound height of 15m. Part of the mound, at least 7 acres is fully intact and appears like a small hill from a distance. A few houses have been built around the mound, the area was probably part of the mound in

the past. The area around the mound has been converted into agricultural fields and the Harse Chhina- Othian road passes right next to the mound. the vicinity of the mound is elevated so the area of the mound could have extended outwards in the past. According to the locals, the mound is protected under the central government, but there is no official record of this on the official website. The site was identified as Chinapati visited by Hiung Tsang by A. Cunningham. Pottery is scattered all over the mound and a ring well can be seen in the section. Typical historical pottery like incurved bowls was found, various early medieval pot sherds like the knife edged bowl were found, and the characteristic medieval pottery, glazed ware sherds were also found.

**Figure 3.8:** View of mound at Lalla Afgana

**28. Lopoke:** 31.71848, 74.63074

The village is in Chogawan block, 3.1 west of it on Chogawan road. The village is built on a mound of height 5m. In the highest part of the mound, houses with Lakhori bricks exposed can be seen (see Appendix A,23, p 225).

**29. Mahanian Koharan:** 31.68545, 75.01482

It is in Jhandiala Guru block, 14.1 km north of it and 14.1 km northeast of Amritsar, 1.9 km south of Jagatpur Bajaj. In the southern part of the village, a temple with faded and destroyed paintings was found. Possibly a modern structure. A Peer Baba Haidri Mahan Shah Ji shrine was built right next to it (see Appendix A, 24, p 225).

**30. Mahawe:** 31.55643, 74.63497

It is in Attari block, 7.1 km from it and 37.5 km from Amritsar on Gill road near Indo-Pak border at 1.7 km to the west. Located at an elevation of 221m, the site covers 1.6 ha with a mound height of 2m. The soil is a mix, and the mound is partly intact (see Appendix A, 25, p 226). Early medieval pottery was found here.

**31. Marari Khurd:** 31.77917, 75.05379

The village is in Majitha block, 12.2 km from it and 28.4 km from Amritsar. It can be approached from the Batala- Amritsar road, 3.7 km northwest of Talwandi Khuman. Positioned at an elevation of 244 m, the site spans 0.8 ha with a mound height of 1.5 m. The soil is alluvial, and the mound is mostly removed with a Gujjar settlement and a graveyard built on top (see Appendix A, 26, p 226). Black Slipped ware that usually accompanies NBPW along with typical historical pottery found.

**32. Mattewal:** 31.67540, 75.13495

The village is in Tarsikka block, 6.5 km from Tarsikka and 30.1 km from Amritsar. The village is located on NH 503A Sri Hargobingpur road. From the highway, taking the Kathunangal-Boparai road, Mattewal is the first village. From the village, the site is situated 2 km southwest amidst agricultural fields. Situated at an elevation of 239m, the site covers 4 ha with a mound height of 6m. The soil is a mix, and the mound is partly intact. Houses have been built on top of the mound. Early historic Black and Red ware sherds along with Black Slipped ware sherds were found here.

**Figure 3.9:** View of mound at Mattewal

**33. Mehal Jhandiala:** 31.77004, 74.89362

The village is in Harse Chhina block, 12.9 km from it and 18.1km from Amritsar. The village is situated on the west of Amritsar-Sangatpur- Fatehgarh Churian road going northwards. Situated at an elevation of 239 m, the site spans 1.2 ha with a mound height of 4 m. The soil is mix, with structures built on top. Early historic and historic pottery along with Black Slipped ware was found. The site is 12.5 km to the east of Lalla Afgana.

**34. Mehta:** 31.66410, 75.24855

It is in Rayya block, 17.2 km from it and 38.5 km from Amritsar on Sri Hargobindpur- Mehta road. Within the Govt. Primary School of the village a monument with paintings inside was found. The structure was renovated overtime but Lakhori bricks were exposed at certain places. Paintings still exist in vibrant colours.

**35. Mohan Bhandari:** 31.85107, 74.91000

The village of Mohan Bhandari is in Ajnala block, on the Ajanala- Fatehgarh Churian road 15.9 km from Ajnala and 30 km from Amritsar. The site is located 800 m south of the village. Positioned at an elevation of 239 m, the site covers 4 ha with a mound height of 8 m. The soil is alluvial, and structures are built on top of the mound. Baba Ratta Peer Ji is located on the mound and are the main owners of the land. There are a few houses on the mound as well (see Appendix A, 28, p 227). Early medieval pot sherds were found on the site.

**36. Nathupur:** 31.568237, 74.718689

It is in Attari block, 15.8 km from it and 22.6 km from Amritsar. It is south of GT road, and the site lies 200 m northwest of the village. The site is 0.8 ha in size. Historical pottery was found scattered at the site.

**37. Pandori Waraich:** 31.68152, 74.92339

It is in Verka block, at 2.6 km northwest of it and 10.1 km from Amritsar on Batala- Amritsar highway. The site is 700 to the east of the village. Situated at an elevation of 232 m, the site spans 1.6 ha with a mound height of 2 m (see Appendix A, 29, p 228). The soil is sandy, and the mound is mostly removed. Early medieval pottery including knife edged bowls was found here.

**38. Preet Nagar:** 31.733181, 74.635517

A medieval tank or reservoir is located on the side of the Preet Nagar road. A structure with medieval bricks is located next to it. Medieval bricks can be seen used in the houses of the village as well.

**39. Ramdas:** 31.96633, 74.90760

It is in Ajnala block, 18.7 km from it and 35.8 km from Amritsar. Ravi is 5.6 km to the west and the international border with Pakistan is 8.6 km to the west. In the western outskirts of the town, there are 3 mosques with one fully intact and taken care of by a local family. Lakhori bricks can be seen exposed in certain areas but the original structure has been built over (see Appendix A, 31, p 229).

**40. Rasulpur Kalan:** 31.64209, 75.05015

The village is in Tarsikka block, 9.9 km from it and 21.2 km from Amritsar on the NH 503 A Sri Hargobindpur road. The site is located next to Sri Guru Harkrishnan Public School. Located at an elevation of 237m, the site covers 0.8 ha with a mound height of 1m. The soil is alluvial, and the mound is mostly removed (see Appendix A, 32, p 229). Typical early medieval pottery was found here.

**41. Sarhala:** 31.73849, 75.11160

The village is in Majitha block, 21.5km from it and 30.6 km from Amritsar. It can be reached from Batala- Amritsar Highway at 3.3 km southeast of Talwandi Khuman. The site is 150 m east of Sarhala village. Positioned at an elevation of 238 m, the site spans 0.8 ha with a mound height of 1.5 m. The soil is alluvial, and the mound is mostly removed (see Appendix A, 33, p 230). Historical pottery along with Black Slipped ware was found.

**42. Saurian:** 31.76507, 74.6641

It is located in Chogawan block near Chhina Karam Singh. It consists of a medieval structure on the outskirts of the village and a medieval well near a modern temple. The area is made of sand dunes and the village is built on top of a mound (see Appendix A, 34, p 230).

**43. Shahpur:** 31.80000, 74.66079

It is in Harse Chhina block, 13.2 km from it and 30.5 km from Amritsar. Situated at an elevation of 225m, the site covers 6 ha with a mound height of 7m. The soil is alluvial, and the mound is intact. Historical and early medieval pottery was found here along with antiquities like animal figurine. Ravi flows 9.7 km to the west of this site.

**Figure 3.10:** View of mound at Shahpur

**44. Shahura:** 31.64432, 74.60793

The village is in Chogawan block, 10.8 km from it and 26.2 km from Amritsar, 3.9 km north of G T road. The village is built on top of a mound of 5 m and spread across 1.6 ha. There is an abandoned mosque with lakhori bricks in the village along with a well with later renovations (see Appendix A, 36, p 231). The village is 3.1 km southwest of Vanieke and 5.7 km east of the international border with Pakistan.

**45. Shahzada:** 31.72373, 75.08770

It is in Majitha block, 12.8 east of it and 21.4 km from Amritsar. The site is 300 m east of the village. Located at an elevation of 239m, the site spans 0.8 ha with a mound height of 1m (see Appendix A, 37, p 232). The soil is alluvial, and most of the mound has been levelled. Early medieval pottery was found here. Kasoor Nala is 200 m to the east.

**46. Talwandi Dasaundha Singh:** 31.68080, 75.04211

The village is in Majitha block, 14.1 km from it and 20.4 km from Amritsar. It can be reached from Sri Hargobindpur road, going north for 3.8km from Dadduana. The site is 500 m east of the village. Positioned at an elevation of 235 m, the site covers 0.8 ha with a mound height of 3m. The soil is alluvial, and houses have been built on the mound (see Appendix A, 38, p 232). Historical and early medieval pottery was found. Kasoor nala is 500m south of the site.

**47. Talwandi Khuman:** 31.75842, 75.08465

The village is in Majitha block, 15.9 km from it and 26.3km from Amritsar on the NH 54 Batala- Amritsar road. The site 600 m south of the village on the other side of the highway.

Situated at an elevation of 242 m, the site spans 1.2 ha with a mound height of 1m (see Appendix A, 39, p 233). The soil is alluvial, and houses are built on top of the mound. Historical and early medieval pottery was found from this site.

**48. Talwandi Sepahimal: 31.81756, 74.88260**

The village is in Harse Chhina block, 16.1 km from it and 26.2 km from Amritsar. The site is located 2.9km to the west of Hardo Putli. The site is 500 m west of the village Talwandi Sepahimal. Located at an elevation of 232m, the site covers 2 ha with a mound height of 3 m. The soil is mix, and structures are built on top of the mound. Typical early medieval pottery like knife edged bowl was found. Peer Baba Sher Shah shrine is built on the mound (see Appendix A, 40, p 233).

**49. Urdhan: 31.88087, 74.86320**

The village is in Ajnala block, 14.1 km from it and 39.2 km from Amritsar. It can be accessed from Ajnala- Fatehgarh Churian road, 1.2 km north of Dial Bharang. The site is 600 m north of Urdhan village. Positioned at an elevation of 231 m, the site spans 1.2 ha. The soil is a mix, and the mound has been removed. Typical Kushana stamped pottery along with Kushana bricks were found along with historical and early medieval pottery found from the site.

**Figure 3.11:** View of mound at Urdhan

**50. Vanieke: 31.656829, 74.636192**

It is in Chogawan block, 5.7 km south of it and 28.5 km from Amritsar. The international border with Pakistan lies 9.4 km to the west and the village lies 5.7 north of G T road. The village is

built on top of a mound 3 m high but no pottery was found. There is an abandoned monument in the middle of the village with Lakhori bricks. Possibly a tower or a minaret (see Appendix A, 42, p 234).

**51. Wachhoa:** 31.84689, 74.88983

It is in Ajnala block, 14.8 km from it and 29.2 km from Amritsar near the Ajnala- Fatehgarh Churian road. Situated at an elevation of 241 m, the site covers 1.6 ha with a mound height of 6 m. The soil is alluvial, and structures are built on top of the mound (see Appendix A, 43, p 235). Historical pottery was found here. It is 1.8 km west of Mohan Bhandari, another site located in the area.

**EXPLORED SITES IN DISTRICT GURDASPUR**

**52. Adi:** 32.092855,75.263020

The village is in Dorangla block, 4.3 km from Dorangla and 17 km from Gurdaspur on the Dorangla- Dostpur road. The mound is located 900 m east of the village on the same road. The elevation of this site is 253 m. The site is locally known as Purana Pind Adi or Theh and covers an area of approximately 10 ha with 5 acres of the mound still intact. The height of the mound is 3 m. The soil is alluvial. Typical historical and early medieval pottery was found here. A Kali Mata Mandir and a Shiv Mandir are built on the mound. The modern bank of river Ravi can be seen 1.05 km north of the site and the international boundary with Pakistan can be located at 1.10 km to the north.

**Figure 3.12:** View of mound at Adi

**53. Arjo Chak:** 32.08398, 75.32975

It is in Dorangla block, 4.9 km southeast of Dorangla. The village can be approached from Prem Nagar- Hardo Channi road. Going west on the road, take a right at Warsola to Chak Araian, Lakhowal, Daburji and then to Arjo Chak. The elevation of the site is 251 m and it is spread across 1.8 ha. The village of Adi is built on top of the mound, rising to the height of 1 m (see Appendix A, 45, p 236). Typical early medieval bowls like pedestal bowls were found here. The site is located 16.01 km from the modern bank of Ravi.

**54. Aulakh:** 31.79556, 75.50398

This village is in Qadian block, 15.2 km from it and 34.1 km from Gurdaspur. The village is on the Batala- Qadian- Harchowal road. The elevation of the site is 262 m and it is spread across 2.8 ha with a height of 3 m. The site is on top of a sand dune and is partly exposed with houses on top (see Appendix A, 46, p 236). Typical historical and early medieval pottery was found. Beas can be found 5.1 km to the east.

**55. Bacho ka Theh:** 31.88098, 75.18324

This village is in Batala block, 8.2 km from it and 37.3 km from Gurdaspur. The elevation is 253 m and the size of the site is 1.2 ha. The village is built on top of the mound at the height of 3 m. The soil is alluvial. The village was named so because in the past various toy carts and figurines made from clay and terracotta were unearthed here (see Appendix A, 47, p 237). The locals interpreted it as toys for children and named the village as 'Bacho ka Theh'. Historical pottery was found here. It is 6.5 km east of Dhawan.

**56. Badowal:** 31.70486, 75.28141

This site is in Sri Hargobindpur block, 17.8 km from it and 37.8 km from Gurdaspur. The site is elevated at 249 m and is spread across 1.8 ha. The village is built on top of the mound of 3 m (see Appendix A, 48, p 227). Early medieval pottery was found.

**57. Bagha:** 31.60939, 75.39792

This site is in Sri Hargobindpur block, 14.2 km south of it and 54.4 km from Gurdaspur. The elevation is 233 m. The site is 300 m to the southeast of the village near a Gujjar settlement. The mound is intact across 1.2 ha and rises to the height of 5 m. Historical knobbed pottery was found here. The soil is sandy and the mound is on top of a sand dune. Beas flows right next to the site. A Peer Baba is built on the mound.

**58. Bahadurpur Rajoa:** 31.74655, 75.52435

This site is located in Sri Hargobindpur block, 10.9 km from it and 39.2 km from Gurdaspur. The village can be reached by the Gurdaspur- Sri Hargobindpur- Tanda road. The site is 600 m southeast of the village and 4.02 km northeast of the site Marhi Panuan. The elevation is 252 m and the size of the site is 1.6 ha. The site is built on top of sand dunes. A Gujjar settlement is built on top of the mound. Typical early medieval pottery was found. Beas is 700 m to the east of the site.

**Figure 3.13:** View of mound at Bahadurpur Rajoa

**59. Bandhianwala:** 31.99486, 75.33071

This site is in Gurdaspur block, 10 km from Gurdaspur. The village can be accessed from NH 54 going northeast towards Gurdaspur by taking a left at Japowal. The site is located 1.3 km northwest of the village and is locally known as Gurdas Nangal da Theh. It is believed to be the site of battle between Banda Bahadur and the Mughals. The site is spread across 8 ha with Gurdwara Garhi Baba Banda Singh Bahadur built on top of the mound (see Appendix A, 50, p 238). The area of the mound is approximately 25 acres and the height is 8m. The rest of the site has been levelled for agriculture. Typical historical pottery like incurved bowls, Black ware and typical early medieval pottery was found here.

**60. Basrai:** 31.79819, 75.41305

This site is in Qadian block, 4.7 km from it and 31.7 km from Gurdaspur. It is 8.5 km west of Aulakh. The elevation is 257 m and it spreads across 1.6 ha. The height of the mound is 3 m and the village is built on top of the mound (see Appendix A, 51, p 239). Typical early medieval knife edged bowl were found here.

**61. Batala:** 31.812229, 75.213349

Anarkali Baradari and the tomb of Shamsheer Khan are located in the eastern part of Batala city on the Beas- Batala road. Both are protected monuments. While there is no absolute date for the Baradari, Shamsheer Khan's tomb and garden was completed in 1590 (see Appendix A, 52, p 239). South of Gurdwara Dera Sahib on the Bara Bazaar road, remains of a medieval structure with a minaret can be seen. This part of Batala is built on top of a mound. Gurdwara Kandh Sahib is located 120 m to the southwest. Around this area, many remains of structures with medieval bricks exposed can be seen.

**62. Behrampur:** 32.132708, 75.389590

This is situated in Dorangla block, 9.8 km from it and 12.1 km from Gurdaspur. The site is 300 west of Behrampur in the agricultural fields. The mound here was at least 2 ha but has been completely levelled for agricultural purposes. The elevation is 257 m, soil is alluvial. The pottery found can be dated to the early medieval period. A medieval structure is located on the outskirts locally called the tomb of Behram Khan. It has been painted over and is maintained by the locals.

**63. Bopar Saidan:** 32.04122, 75.27097

This site is situated in Gurdaspur block, 15.2 km away from it. The elevation is 260 m and the site is spread across 4 ha. The village is built on the mound (see Appendix A, 53, p 240). The height of the mound is approximately 10 m. Historical pottery was found here.

**64. Bijliwala:** 31.87088, 75.15260

The site is in Batala block, at 9.8 km from it and 40.2 km from Gurdaspur. The site is 1.3 km southeast of the village next to the Upper Bari Doab Canal. The elevation is 250 m. The mound is intact and spreads across 2 ha with the height of 7 m (see Appendix A, 54, p 241). The soil is alluvial. Early medieval pottery like the knife edged bowls were found here. Bacho ka Theh is located 3.1 km to the northeast.

**65. Bikhariwal:** 32.01012, 75.25055

The village is in Kalanaur block, 11.1 km from it and 14.9 km from Gurdaspur. The village can be accessed from the Dera Baba Nanak-Gurdaspur road. The site is located 700 m north of the village. The site is spread across 7 acres with a mound of 1.2 ha still intact and 5 m in height with a school built on top. The elevation is 256 m. The soil is alluvial. Red Slipped Ware bowl with affinity to NBPW was found along with other historical incurved bowls. Early medieval

pottery was also found. The modern bank of Ravi along with the international boundary with Pakistan is located 9.8 km to the north of this site.

**Figure 3.14:** View of mound at Bikhariwal

**66. Chak Deepewal:** 31.95171, 75.26179

The site is in Dhariwal block, 7.9 km west of it and 20.3 km from Gurdaspur. The site is 200 m west of the village. The elevation is 255m. The mound has been removed but it spread across 1.6 ha (see Appendix A, 56, p 242). Early medieval pottery was found here. A terracotta mould depicting a goddess and a terracotta stamp of a flower were found as well from this site.

**67. Chak Mehman:** 31.93175, 75.02949

The site is in Dera Baba Nanak block, 16.4 km from it and 43.6 km from Gurdaspur. It is 4.4 km north of Chhichhrewal. The site is 500 m north of the village. The elevation is 240 m. The mound is intact with a graveyard on top and spreads across 1.2 ha (see Appendix A, 57, p 242). The height is 4 m. The soil is alluvial. Early medieval pottery was found. The international boundary with Pakistan is 11.6 km to the north and Ravi flows 13.6 km to the north of this site.

**68. Chatha:** 31.87935, 75.08798

The site is in Fatehgarh Churian block, 15.1 km from it and 49.6 km from Gurdaspur. The village can be approached on Dera road from Aliwal next to the canal. The mound is 0.8 ha but has been levelled (see Appendix A, 58, p 243). The elevation is 246 m and the soil is mixed. Historical pottery was found here. It is located 1.1 km east of Seera.

**69. Chaudhariwal:** 31.71719, 75.26133

The village is in Sri Hargobindpur block, 23.2 km from it and 46.3 km from Gurdaspur. The elevation is 241 m. The site is 20 m north of the village. The mound is 0.8 ha and 1 m tall but has been mostly removed. The soil is alluvial, and a Peer Baba is built on top of the mound. Historical pottery was found here.

**70. Chhawar Rian Bangar:** 31.961059, 75.440333

The site is in Kanhuwan block, 5.7 km north of it and 15.2 km from Gurdaspur. The soil is sandy with sand dunes in the vicinity and the elevation is 265 m. The mound is spreads across 2 ha and the height is 15 m as it is on top of a sand dune. There are houses built on the mound (see Appendix A, 59, p 243). Historical pottery was found. Beas is 9.4 km to the east.

**71. Chhichhrewal:** 31.89119, 75.02081

The village is in Fatehgarh Churian block at 8.3 km from it and 54.2 km from Gurdaspur. The site is located at an elevation of 242 m around 700 m north of the villlage. The site can be approach going northwest from Kala Afgana for 4.5 km. The mound is partly intact and spreads across 3.2 ha and 4 m in height. The soil is mix. Typical historical and early medieval pottery was found here. The site is located 16.6 km from the modern bank of Ravi and the international boundary with Pakistan to the north.

**Figure 3.15:** View of mound at Chhichhrewal

**72. Dabanwala:** 31.83913, 75.14178

The site is in Fatehgarh Churian block, 22.1 km from it and 42.4 km from Gurdaspur on Aliwal road. The soil is alluvial. The village has been built on top of the mound. The size of the mound is 0.8 ha and the height is 4 m. Part of the mound is exposed in the middle (see Appendix A, 61, p 244). Historical and early medieval pottery was found here. The Upper Bari Doab Canal is 1.8 km to the west of this site.

**73. Dale Chak:** 31.899119, 75.082518

The site is in Fatehgarh Churian block, 17.1 km from it and 51.5 km from Gurdaspur. The elevation is 246 m. The soil is sandy, and the mound is spread across 2.8 ha and is 4 m tall. The mound is partly intact. Historical and early medieval pottery including knife edged bowl and a complete pot were found. It is 2.2 km to the north of Chatha.

**Figure 3.16:** View of mound at Dale Chak

**74. Dehriwala I:** 32.04129, 75.20976

The site is in the Kalanaur block, 9.8 km from it and 23.2 km from Gurdaspur near NH 354 Dera Baba Nanak- Gurdaspur road at an elevation of 248 m. The mound is spread across 1.6 ha and is 5 m tall. The soil is a mix of different types. The village is situated on top of the mound (see Appendix A, 63, p 245). Early medieval pottery was found. Ravi is located 6.8 km to the northwest and the international border with Pakistan is at 4.2 km to the northwest. Bikhariwal is 5.1 km to the southeast.

**75. Dehriwala II:** 31.88304, 75.34402

Located in the Kanhuwan block at an elevation of 263m, the site covers an area of 2 ha with a mound height of 5m (see Appendix A, 64, p 246). The soil is alluvial, and the village is built on top of the mound. There is a ruined mosque with Lakhori bricks on the site.

**76. Dhapai:** 31.77770, 75.40247

It is situated in the Qadian block near the Batala- Qadian- Harchowal road, 6.1 km southeast of Dadian. At an elevation of 256 m, the site covers 1.2 ha with a mound height of 1 m. The soil is alluvial, and the village is situated on top of the mound. There is a temple complex with paintings on the site. Paintings related to Hinduism and Sikhism can be identified. According to the locals, the structure is at least a century old (see Appendix A, 65, p 247).

**77. Dhawan:** 31.88083, 75.11440

The site is situated in the Dera Baba Nanak block 24.3 km from it and 44.5 km from Gurdaspur. It is 3.5 km east of Seera. At an elevation of 247 m it spans 1.6 ha, and the mound is 3 m tall. The soil is alluvial. The village is located on top of the mound (see Appendix A, 66, p 248). Early medieval pottery was found from Dhawan.

**78. Dhesian:** 31.879606, 75.413215

The village is in the Kanhuwan block, 5.9 km from it and 19.1 km from Gurdaspur. It is 1.7 km northwest of Warraich. The site is 100 m north of the village Dhesian. Peer Baba and graveyard built on the site. At an elevation of 259 m, the site covers 2 ha with a mound height of 5 m (see Appendix A, 67, p 248). The soil is alluvial. Early medieval pottery was retrieved from the site. The Kasoor branch nehar is 1.8 km to the west of this site.

**79. Dhulowal:** 31.94793, 75.12949

Situated in the Dera Baba Nanak block, 12.5 km from it and 26.7 km from Gurdaspur. At an elevation of 246 m, the site spans 2 ha with a mound height of 4 m. The soil is sandy, and the village is situated on top of the mound (see Appendix A, 68, p 249). No pottery was found but a coin was found from this site.

**80. Dinanagar:** 32.13251, 75.47302

It is in Dinanagar city, near the Municipal Council office. There are remains of a structure that the locals say dates to Maharaja Ranjit Singh. According to them, it was a bathhouse for the queen. It is within the periphery of the municipal council's office and is maintained by them. 100 m southeast of it lies another structure that is supposedly related to Maharaja Ranjit Singh as well. These remains are called Baradari.

**81. Dorangla:** 32.1061065, 75.3032065

The town of Dorangla is the headquarter of Dorangla block and lies 11.5 km northwest of Gurdaspur. The international border with Pakistan lies 3.4 km to the west and the Ravi is 3.8 km to the west. The town is built on top of a mound and a house with medieval bricks was found within the town. The house was inhabited by locals.

**82. Faizulla Chak:** 31.89238, 75.32505

The village is in Dhariwal block, 11.2 km from it and 20.1 km from Gurdaspur. The site is 4.7 km southeast of Sochanian and 600 m northeast of Faizulla Chak village. The site is locally known as Nishan Singh da dera. Situated at an elevation of 255 m, the site covers 0.8 ha with a mound height of 1 m. The soil is alluvial, and houses are built on top of the mound (see Appendix A, 69, p 249). Early medieval pottery was found.

**83. Fatehgarh Churian:** 31.8624, 74.9548

Parts of the town are built on top of a mound. In the middle of the town a medieval temple called Panj Mandir is located.

**84. Fazlabad:** 31.94040, 75.15083

The village is in Dera Baba Nanak block, 21.2 km from it and 32.1 km from Gurdaspur. Located at an elevation of 245 m, the site spans 0.4 ha with a mound height of 1 m. The soil is alluvial, and houses are built on the mound. Historical pot sherds were found here. The site is 2.1 km south of Wadala Bangar.

**Figure 3.17:** View of mound at Fazlabad

**85. Ganji:** 32.1137006, 75.346950

The village is in Dorangla block, 4.5 km from it and 9.9 km from Gurdaspur. The site is in the outskirts of the village. Situated at an elevation of 247 m, the site spans 2 ha. The mound height is 4 m. The soil is alluvial, and Govt. Primary School and a Gurdwara are built on the mound (see Appendix A, 70, p 250). Historical pottery was found here. The international border with Pakistan and Ravi is at 6.5 km to the west.

**86. Ghoga:** 31.81506, 75.12007

It is in Fatehgarh Churian block, 21.2 km from it and 42.7 km from Gurdaspur. The site is 400 m north of the village. Located at an elevation of 246 m, the site spans 2.4 ha with a mound height of 1.5 m. The soil is a mix, and houses are built on the mound (see Appendix A, 71, p 250). Historical and early medieval pottery was found on this site. It is 4.1 km south of Kastiwal.

**87. Ghurala:** 32.02497, 75.41868

It is in Gurdaspur block, 3.1 km away from it. Situated at an elevation of 268 m, the site covers 2 ha with a mound height of 8 ft. The soil is alluvial, and the village is on top of the mound (see Appendix A, 72, p 251). Historical pot sherds along with early medieval knife edged bowls were found here.

**88. Hakimpur:** 31.97680, 75.17391

It is in Kalanaur block, 4.8 km southeast of it, 25.9 km from Gurdaspur on the Batala- Kalanaur highway. The site is 300 m northwest of the village. Positioned at an elevation of 248 m, the site spans 0.8 ha. The soil is alluvial, and the site is levelled (see Appendix A, 73, p 251). Early medieval pottery was found here. The site is 2.4 km northeast of Wadala Bangar.

**89. Hardo Bathwala:** 32.05041, 75.38932

It is in Gurdaspur block, 1.5 km north of it. The elevation is 266 m and the mound is spread across 1.6 ha with a Gurdwara built on top. Pot sherds can be found around the Gurdwara (see Appendix A, 74, p 252). Typical historical and early medieval pottery was found here.

**90. Hardowal:** 31.91030, 74.92106

The village is located in Fatehgarh Churian block, 7.4 km from it and 58 km from Gurdaspur. The village can be access on Fatehgarh Churian – Ramdas road. It is located 2.5 km west of Loharrranwali. Located at an elevation of 231m, the site covers 6 ha with a mound height of

2m. the mound is located 1.3km south of the village. Typical Kushana stamped pottery, along with Black Slipped ware, Historical and early medieval pottery was found here. The soil is a mix, and the mound is intact.

**Figure 3.18:** View of mound at Hardowal

**91. Jangla:** 31.84574, 75.08079

The village is in Fatehgarh Churian block 13.9 km from it and 46.2 km from Gurdaspur. The village can be accessed from the Aliwal- Fatehgarh Churian road. It is 5.75 km east of Mann Sandwal. The site is locally known as Kadarabad, which according to the locals was its ancient name. Situated at an elevation of 246 m, the site spans 3.6 with a mound height of 8 m. The soil is alluvial, and structures along with a Gurdwara are built on top of the mound. Typical historical and early medieval pottery was found along with bowls showcasing a late historical transitional phase.

**92. Joian:** 32.012625, 75.297383

This village is in Gurdaspur block, 12.2 km away from it. The site is located on the outskirts of the village in the north. Located at an elevation of 259 m, the site spans 0.8 with a mound height of 5ft. The soil is alluvial, and structures are built on the mound. Typical historical pottery like the incurved bowls and early medieval pottery like knife-edged bowls were found here.

**Figure 3.19:** View of mound at Joian

**93. Kala Afgana:** 31.885977, 75.043832

It is in Fatehgarh Churian block, 9.3 km from it and 51.8 km from Gurdaspur. It is 3.5 km southwest of Dale Chak and 1.5 km east of Chhichhrewal. The village is on top of a mound of 1 m. There is an old mosque that is now inhabited by a local family. The mosque has been repaired overtime but Lakhori bricks can be seen at places (see Appendix A, 77, p 253).

**94. Kala Gorey:** 31.95560, 75.19843

The village is in Dhariwal block, 14.9 km from it and 27.1 km from Gurdaspur. The village can be approached from the Batala-Kalanaur road. It is situated at 3.8 km from Wadala Bangar to the east. The site is in the outskirts of the village in the north. Located at an elevation of 254 m, the site covers 10.5 ha with a mound height of 4 m. The soil is sandy, and the mound is intact. Various Kushana bricks were seen at the mound and typical Kushana stamped pottery was found. Historical Black Ware sherds along with incurved bowls and early medieval sherds were also found. Antiquities including ghat shaped bead and figurines were found here.

**Figure 3.20:** View of mound at Kala Gorey

**95. Kalanaur :** 32.01829, 75.16435

It is in Kalanaur block, 25 km from Gurdaspur. On Takht-i-Akbari road in the northeastern outskirts of the city, the monument known as Takht-i-Akbari is located. The monument was built in 1556, when Akbar was crowned as Emperor at this spot. Nearby a structure with medieval bricks can be seen in ruins (see Appendix A, 79, p 254). It is likely the tomb of Jamil Beg as described by Rodgers.<sup>2</sup>

**96. Kandila:** 31.76613, 75.35245

The village is in Qadian block, 8.4 km from it and 37.3 km from Gurdaspur. Positioned at an elevation of 259 m, the site covers 1.2 ha with a mound height of 4 m. The soil is alluvial, with part of the mound exposed. The village is built on top of the mound (see Appendix A, 81, p 255). Typical Kushana stamped pottery along with historical and early medieval pottery was found here. Early medieval Lakhori bricks were also seen at the site. Antiquities include an animal figurine. It is located 7.1 km east of Radhan.

**97. Kangra:** 31.65453, 75.46321

It is in Sri Hargobindpur block, 3.5 km to its south. Situated at an elevation of 243 m, the site spans 2.8 ha with a mound height of 3 m. The soil is sandy, and the mound is intact. Typical historical incurved bowls along with Black Slipped Ware sherds were found here. Beas is 400 m to the east.

**Figure 3.21:** View of mound at Kangra

**98. Kastiwal:** 31.85105, 75.11014

It is in Fatehgarh Churian block, 18.9 km east of it and 45 km from Gurdaspur. It is 2.8 km east of Jangla. The site is 700 m southwest of the village Kastiwal. Located at an elevation of 245 m, the site covers 0.4 ha with a mound height of 1 m. The soil is a mix, with structures built on top. Early medieval pottery was found here. 300 m north of this, on the Dera road, medieval structures can be found. One of them resembles a gateway and the other resembles a tomb (see Appendix A, 82, p 256). A local family inhabits the area around the structures and takes care of it. A boundary wall with medieval bricks can also be seen. It was a big enclosure. A Peer Baba is built within the enclosure as well.

**99. Kathgarh:** 32.1017313, 75.3374912

The village is in Dorangla block, 4.1 km from it and 10.3 km from Gurdaspur. Positioned at an elevation of 248 m, the site spans 2 ha with a mound height of 3 m. The soil is alluvial, and Govt. Primary School is built on top of the mound. Early medieval pottery like the knife edged bowl was found here. It is located 1.2 km northwest of Rawal Pindi.

**100. Khanowala:** 31.92028, 75.16952

The village is in Kalanaur block, 10.9 km from it and 34.2 km from Gurdaspur on the Batala-Kalanaur road. Situated at an elevation of 248 m, the site spans 1.6 ha with a mound height of 3 m. The soil is a mix, with a school and houses built on top (see Appendix A, 83, p 256). Early medieval pottery was found here.

**101. Khokharwala:** 31.72282, 75.49233

The village is in Sri Hargobindpur block, 6.5 km from it and 40.2 km from Gurdaspur. The site is 800 m to the southeast of the village. Located at an elevation of 250m, the site covers 1.6 ha with a mound height of 3m. It is on top of a sand dune and the site is partly intact. Historical and early medieval pottery along with an animal figurine were found at the site. Beas flows 3.9 km to the east.

**Figure 3.22:** View of mound at Khokharwala

**102. Khudi:** 31.70411, 75.43228

It is in Sri Hargobindpur block, at 4.9 km from it and 44.2 km from Gurdaspur on Batala- Sri Hargobindpur road. It is locally known as Ramdas da dera. Khudi is not a big village but has been divided into many deras (smaller settlements). Positioned at an elevation of 251 m, the site spans 0.8 ha. The soil is sandy, and the site is levelled. Typical historical pottery including Grey Ware sherds and incurved bowls, and early medieval knife edged bowls were found here. Beas is located 5.5 km to the southeast.

**103. Kot Mian Sahib:** 31.98895, 75.13938

The village is in Kalanaur block, 3.1 km south of Kalanaur and 28.3 km from Gurdaspur. It can be approached from the Batala- Kalanaur highway. The site is 500 m north of the village in the middle of agricultural fields. It is locally known as Dalip Singh da Theh. Located at an elevation of 250 m, the site spans 0.8 ha. The soil is a mix, and the site is levelled (see Appendix A, 85, p 257). Early medieval pottery like knife edged bowls were found here.

**104. Ladha Munda:** 31.70360, 75.34132

The village of Ladha Munda is situated in Sri Hargobindpur block on the NH 503 A Sri Hargobindpur–Amritsar road. The mound is partly intact and located amidst agricultural fields 800 m south of the village on the Ladha Munda- Athwal link road. Positioned at an elevation of 251 m, the site spans 10 ha with the gradual slope of the mound peaking at 9 m. Pot sherds can be observed around the mound up to 20 ha. Typical early medieval pottery was found here. Part of the mound is owned by the Panchayat and the fields are owned by various villagers. The soil is sandy and the terrain includes sand dunes. Modern bank of river Beas lies 17.3 km to the east.

**Figure 3.23:** View of mound at Ladha Munda

**105. Lakhawal:** 32.070325, 75.340757

It is in Gurdaspur block, 9.2 km from it. The site is located 700 m north of the village. The mound is partly intact and rises to 2 m. The site spreads across 1.8 ha. A house has been built on the mound (see Appendix A, 87, p 258). Typical early medieval knife edged bowl and late historical transitional bowls were found here.

**106. Langianwali:** 31.65455, 75.32604

The village is in Sri Hargobindpur block, at 17.1 km from it and 57.6 km from Gurdaspur on NH 503 A Sri Hargobindpur road. The site is 300 m west of the village near the water tank. Situated at an elevation of 248 m, the site spans 0.6 ha with a mound height of 2 m. The soil is alluvial, and the site is partly intact (see Appendix A, 88, p 259). Historical and early medieval pottery was found here. Beas is 8.5 km to the southeast.

**107. Loharanwala:** 31.915993, 74.948663

The village is in Fatehgarh Churian block, 7.5 km from it and 53 km from Gurdaspur. It can be accessed from the Fatehgarh Churian- Dera Baba Nanak road. Going north on the road, take a left at Veela Teja and Loharranwala is the second village on the right. The site is located 400 m south of the village. Located at an elevation of 240 m, the site spans 5.2 ha with a mound height of 7 m. The soil is sandy, and the mound is intact. Characteristic Kushana stamped pottery along with historical and early medieval pottery was found here. A graveyard is built on the mound.

**Figure 3.24:** View of mound at Loharanwala

**108. Machhrala:** 32.02542, 75.06473

It is in Dera Baba Nanak block, 7.5 km southeast of it and 33.5 km from Gurdaspur. The site is 250 m northwest of the village. Positioned at an elevation of 242m, the site spans 0.8 ha with a mound height of 1 m. The soil is a mix, with houses built on top (see Appendix A, 90, p 260). Typical historical and early medieval sherds were found.

**109. Malakwala:** 31.902592, 75.040020

It is in Fatehgarh Churian block, 10.9 km from it and 43.2 km from Gurdaspur. It is 1.6 km north of Kala Afgana and 900 m west of village Malakwala. Situated at an elevation of 239 m, the site covers 1.2 ha with a mound height of 1 m. The soil is alluvial, and the site is levelled.

Early medieval pot sherds were found here. Graveyard is built on the mound (see Appendix A, 91, p 260).

**110. Manjianwali:** 31.88713, 74.99327

It is in Fatehgarh Churian block, 5.2 km from it and 56.4 km from Gurdaspur on the Aliwal-Fatehgarh Churian road. Positioned at an elevation of 242 m, the site spans 0.8 ha. The soil is alluvial, and the mound is levelled. Early medieval pottery was found here. It is 4.6 km west of Chhichhrewal.

**111. Mann Sandwal:** 31.851272, 75.019801

The village is in Fatehgarh Churian block, 9.9 km from it and 55.1 km from Gurdaspur. the village can be approached from the Aliwal- Fatehgarh Churian road. The village is located 4.5 km south of Chhichhrewal. The site is located 300 m north of the village. Situated at an elevation of 248 m, the site covers 5.6 ha with a mound height of 9 m. The soil is a mix, and the mound is intact. Typical historical wares like Black Slipped Ware and spouted vessels were found here along with some knife edged bowls. Peer Baba Mian Lal Ji built on the mound. A well with medieval bricks in the lower level was also found.

**Figure 3.25:** View of mound at Mann Sandwal

**112. Marhi Panuan:** 31.711435, 75.489153

The village is in Sri Hargobindpur block, 4.9 km from it and 36.1 km from Gurdaspur. It can be approached from the Gurdaspur- Sri Hargobindpur- Tanda road. The site is on the outskirts of the village. Gurdwara is built on top. Located at an elevation of 253 m, the mound spans 1.6

ha with a mound height of 5 m. The soil is alluvial, and the site is levelled and partly intact (see Appendix A, 93, p 261). Early medieval pottery was found here. Beas is located 3.7 km to the east.

**113. Massanian Sharif:** 31.794710, 75.263989

It is in Batala block, 5.4 km east of it and 35.8 km from Gurdaspur on the Batala- Sri Hargobindpur road. The village is built on top of a mound and in the middle has a small mosque with medieval bricks that has been built over. In the outskirts of the village, a Dargah of Hazrat Shah Badar Diwan Qadri Baghdadi and a Peer Baba is built. The Dargah has beautiful glazed tile decorations in the front and 4 minarets that have been painted over in the bottom and top. The rest of the Dargah is also painted over (see Appendix A, 94, p 262). Possibly built in 16<sup>th</sup> century.

**114. Mokha:** 32.06399, 75.46869

It is in Dinanagar block, 8.9 km from it and 13.2 km from Gurdaspur. The site is 650 m northeast of the village. Located at an elevation of 270 m, the site covers 1.2 ha with a mound height of 5ft. The soil is sandy, and a temple was built with part of the mound intact. Historical pottery including knobbed pots and early medieval knife-edged bowls were found here.

**Figure 3.26:** View of mound at Mokha

**115. Mustfapur:** 31.93915, 75.18038

It is in Kalanaur block, 10.2 km from it and 33.6 km from Gurdaspur. It can be accessed through the Batala- Kalanaur road. It is 1.9 km west of Paniar. The site is 400 m south of the village.

Positioned at an elevation of 248 m, the site spans 2 ha with a mound height of 1.5 m. The soil is a mix, and the site is mostly removed. Typical historical and early medieval pottery was found along with bowls depicting a transitional late historical phase.

**116. Nurpur:** 32.077420, 75.265950

The village Nurpur is in Dorangla block around 4.3 km south of village Adi. It is situated 6.4 km from Dorangla and 15.1 km from Gurdaspur. Located at an elevation of 253 m, the site spans 3.6 ha with a mound height of 5.5 m. The soil is alluvial, and the village is built on top of the mound. The site revealed pot sherds dating to the historical and early medieval period.

**Figure 3.27:** View of mound at Nurpur

**117. Nushera Majha Singh:** 31.89366, 75.27808

It is in Dhariwal block, 8.7 km from it and 22.3 km from Gurdaspur on the Batala- Gurdaspur highway. The site is on the opposite side of the highway from the village. A veterinary hospital is on the mound. Situated at an elevation of 253 m, the site covers 1.2 ha with a mound height of 3 m. The soil is a mix, with structures built on top (see Appendix A, 96, p 263). Historical and early medieval pottery was found here.

**118. Pandori:** 32.05727, 75.50237

It is in Dinanagar block, 10.8 km from it and 13.1 km from Gurdaspur. The Beas river is 5.2 km to the east and the Upper Bari Doab canal is 1.8 km to the west. The Pandori Dham temple is spread across 1.6 ha. According to the locals, the temple was first built by Jahangir. Parts of an old temple with smaller bricks can be seen all over the temple complex (see Appendix A, 97, p 263).

**119. Qadian:** 31.818843, 75.376225

The city of Qadian is the headquarters of Qadian block. The city is said to have been established by the Mughals in 16<sup>th</sup> century. It eventually became the birthplace of the Ahmadiyya movement under Islam. The city currently rests on top is a huge mound that has been built over completely and includes monuments like the Asqa mosque that was built in 1876. No pottery was retrieved from Qadian but a tentative medieval cultural sequence is attributed.

**120. Qila Nathu Singh:** 32.03904, 75.23664

It is in Kalanaur block, at 11.1 km from it and 19.5 km from Gurdaspur on NH 354 Dera Baba Nanak – Gurdaspur road. Situated at an elevation of 249 m, the site spans 1.2 ha with a mound that has been levelled for agriculture. The soil is a mix. Early medieval pottery was found here. It is 2.5 km east of Dehriwala.

**121. Radhan I:** 31.74869, 75.28068

It is in Qadian block, 14.3 km from it and 46.7 km from Gurdaspur near Gurdwara Teer Sahib Marg. The site is 100 m northwest of the village. It is locally called Hardaan. Located at an elevation of 249 m, the site covers 1.6 ha with a mound height of 4 m. The soil is alluvial, with houses built and the mound partly exposed. Early historic Grey Ware and Black Slipped Ware along with typical historic pottery was found.

**Figure 3.28:** View of mound at Radhan I

**122. Radhan II:** 32.07284, 75.29949

It is in Dorangla block, 3.7 km south from it and 9.2 km from Gurdaspur. It can be accessed from the Hardo Chhani road. The village is built on top of a mound and spreads across 0.8 ha at a maximum height of 2 m (see Appendix A, 99, p 264). Historical pottery was found here.

**123. Raipur:** 32.121868, 75.408638

It is located in Dinanagar block near Behrampur. In the middle of agricultural fields, a ruined structure with medieval bricks can be seen surrounded by trees. It is likely the mosque built by Haji Rajab Ali in 1684 as described by Rodgers.<sup>3</sup>

**124. Rahimabad:** 32.00456, 75.11234

It is in Dera Baba Nanak block, 10.8 km from it and 28.5 km from Gurdaspur. The village is located 3.7 km southwest of Kalanaur. 500 m west of the village, an old mosque with Lakhori bricks can be found (see Appendix A, 100, p 265). It is located 800 m south of Kiran canal.

**125. Rampur:** 31.82533, 75.34935

The village is in Kanhuwan block, 20.1 km from it and 34.2 km from Gurdaspur. The site is 500 m southwest of the village. The site is 2.6 km northwest of Asqa Mosque, Qadian. It can be approached from Batala- Qadian-Harchowal road going west by taking a right near Laurens International school to Bhittewadh, continuing north for 1.1 km the mound will be on the right. Located at an elevation of 257 m, the site spans 2 ha with a mound height of 5 m. The soil is alluvial, and the mound is intact. Historical pottery including Black Ware and early medieval knife edged bowls were found. Kasoor branch nehar is 1.8 km to the west. Peer Baba built on the mound (see Appendix A, 101, p 265).

**126. Rattar Chhattar:** 32.02047, 74.98159

It is in Dera Baba Nanak block, 5.9 km from it and 42.2 km from Gurdaspur. Positioned at an elevation of 244 m, the site covers 2 ha with a mound height of 3 m. the village is built on the mound. The soil is alluvial, and a monument is built with part of the mound exposed. Early medieval pottery like the knife edged bowls were found here. Imam Ali Shah's (1798-1865) mausoleum is built here which is known as Makan Sharif Rattar Chhattar (see Appendix A, 102, p 266). It is 1.9 km east of the Ravi.

**127. Rawalpindi:** 32.09356, 75.34338

The village is in Dorangla block, 6.3 km from it and 10.1 km from Gurdaspur. Situated at an elevation of 263 m, the site spans 1.6 ha with a mound height of 2 m. The soil is alluvial, and

the village is built on top of the mound (see Appendix A, 103, p 267). The pottery found here belonged to the early medieval period. It is 2.2 km south of Ganji.

**128. Sadana:** 32.09615, 75.53084

It is situated in Dinanagar block, 11 km from it and 19 km from Gurdaspur. The village can be accessed from NH 54 Dinanagar bypass. Going northwards, take a right at Gwalia, then to Jakria, cross the Upper Bari Doab Canal near Maluk Mattu, then to Bhagwanpur and you reach Sadana. It is located 7.5 km southwest of Sakandra. Positioned at an elevation of 229 m, the site covers 3.2 ha with a mound height of 2 m. The soil is sandy, and the site is partly intact with a Baba Lakh Data temple on top. There are agricultural fields around it (see Appendix A, 104, p 267). Sand dunes can be seen around the village. The site consisted of typical historical and early medieval pottery along with some bowls showcasing a transitional late historical phase.

**129. Sakala:** 31.70145, 75.41261

It is in Sri Hargobindpur block, 7.9 km from it and 47.5 km from Gurdaspur. Located at an elevation of 250 m, the site covers 2 ha with a mound height of 5 m. The soil is alluvial, and the village is built on top of the mound. Historical pottery was retrieved from the site. It is 1.9 km west of Khudi.

**130. Sakandra:** 32.13264, 75.56509

The village is in Dinanagar block. It lies 15.1 km from Dinanagar and 22.07 km from Gurdaspur. Positioned at an elevation of 288 m, the site spans 4.8 ha with a mound height of 10m. The soil is sandy and 2.5 acres of the mound is intact. The terrain consists of sand dunes. The site is located 1.5 km from the village between villages Sakandra and Chaunta. The modern bank of river Beas is located 4.5 km from the site. Typical Kushana stamped pottery was found along with Black slipped ware sherds that are associated with NBPW but no NBPW sherds were found.

**Figure 3.29:** View of mound at Sakandra

**131. Salimpur Araian:** 32.023073, 75.347389

It is in Gurdaspur block, 4.5 km east of it on Dera Baba Nanak- Gurdaspur road. The site lies 600 m south of the village. The site is at an elevation of 255 m and the mound is partly intact across 0.8 ha. The height of the mound is 8 ft. Part of the mound has been removed for agriculture and the surface of the mound is also used for agriculture. Typical early medieval pottery like knife edged bowls was found here. Baked bricks can be seen in the section of the mound (see Appendix A, 105, p 268).

**132. Sanghor:** 32.12403, 75.31727

The village is in Dorangla block, 2.6 km north of it and 15.2 km from Gurdaspur. It can be approached through Tahli Sahib main road which is parallel to the Dussi Bandh. The village is on the left when coming from Dorangla. The site is in the outskirts of the village. Positioned at an elevation of 242 m, the site covers 2 ha with a mound height of 1.5 m. The soil is alluvial, and structures are built on top (see Appendix A, 106, p 2168). Early medieval pottery was found here. The international border with Pakistan is at 3.3 km west from this site and Ravi is at 3.8 km to the west.

**133. Sarupwali Khurd:** 31.76574, 75.14059

It is in Batala block, 13.3 km from it and 54.5 km from Gurdaspur on Batala- Amritsar road. Located at an elevation of 242 m, the site covers 1.6 ha with a mound height of 2 m. The soil is a mix, and the village is built on top of the mound with parts of the section exposed near the

agricultural fields (see Appendix A, 107, p 269). Historical Grey Ware and early medieval knife edged bowl were found.

**134. Sathiali:** 31.89912, 75.42575

The village is in Kanhuwan block, 2.7 km southwest of it and 17.6 km from Gurdaspur. Situated at an elevation of 264 m, the site spans 1.2 ha with a mound height of 3 m. The soil is alluvial, and the site is partly intact with the village built on it (see Appendix A, 108, p 269). Early medieval pottery was found. Sabrawan branch nehar is located next to it. Beas is 11.4 km to the east.

**135. Seera:** 31.87627, 75.07750

The village is in Fatehgarh Churian block, 13.1 km from it and 49.2 km from Gurdaspur. The village can be reached on the Aliwal- Fatehgarh Churian road. The site is 3.2 km north of site Jangla. Located at an elevation of 245 m, the site covers 1.6 ha with a mound height of 3 m. The soil is sandy, and a Gurdwara is built on top (see Appendix A, 109, p 270). Typical historical pottery along with early medieval knife edged bowls were found. Aricanut shaped bead was also found.

**136. Shikar:** 31.96836, 75.06494

It is in Dera Baba Nanak block, 7.5 km from it and 37.3 km from Gurdaspur. It can be approached from NH 503 D Dera Baba Nanak road. The site is 100 m south of the village Shikar and 5.1 km northeast of Chak Mehman. Located at an elevation of 242 m, the site spans 1.2 ha (see Appendix A, 110, p 270). The soil is alluvial, and the mound has been levelled. Early medieval pottery was found. The international border with Pakistan is at 8.7 km to the north and Ravi is at 10.5 km to the north.

**137. Singowal:** 32.06496, 75.28329

It is in Dorangla block, 4.9 km from it and 12.1 km from Gurdaspur. Situated at an elevation of 250 m, the site covers 1.6 ha with a mound height of 3m. The soil is alluvial, and the mound is intact with a small house on top. The land is owned by the Gurdwara. Kushana stamped pottery along with historical pottery was found here. A lamp with incised flower design was also found.

**Figure 3.30:** View of mound at Singowal

**138. Sochanian:** 31.90605, 75.27758

The village is in Dhariwal block, 12.1 km from it and 21.2 km from Gurdaspur. The village is on NH 54 near Naushera Majha Singh. Positioned at an elevation of 254 m, the site spans 2 ha with a mound height of 2 m. The soil is alluvial, and the mound is partly intact. Typical early medieval knife edged bowl was found. A graveyard is built on top of the mound. Kasoor Nala is located 1.8 km to the east.

**139. Sri Hargobindpur:** 31.686094, 75.479819

It is a town in Sri Hargobindpur block, at the bank of river Beas. It is said to have been built by the sixth Guru, Shri Guru Hargobind Sahib Ji. It was also the site of a battle between the Sikhs and the Mughals in 1630. The Gurdwara Dhamdama Sahib stands at the site of the battle. There is a mosque with medieval bricks, locally known as Guru ki Maseet that was supposedly built by Guru Hargobind Ji for the local muslims (see Appendix A, 112, p 271). The neighbouring area is built on top of a mound. It would date to the sixteenth century.

**140. Talwandi:** 32.15195, 75.47711

It is in Dinanagar block, 5.2 km from it and 19.1 km from Gurdaspur on NH 54 Guurdaspur-Pathankot highway. The site is 100 m west of the village next to the railway track. Situated at an elevation of 269 m, the site spans 1.6 ha with a mound height of 10ft. The soil is alluvial, and the site is partly intact. Historical pottery along with early medieval knife edged bowls were found here. Ravi is located 8.5 km northwest of it.

**Figure 3.31:** View of mound at Talwandi

**141. Tapala:** 32.00479, 75.08107

The village is in Dera Baba Nanak block, 8.8 km from it and 34.2 km from Gurdaspur on the NH 503 D Dera Baba Nanak road. Located at an elevation of 241 m, the site spans 0.8 ha with a mound height of 1 m. The soil is alluvial, and structures are built on top (see Appendix A, 114, p 272). The pottery found throughout the site belongs to the early medieval period. It is located at 6.1 km to the west of Kalanaur.

**142. Theh Gulam Nabi:** 31.89036, 75.29527

It is in Dhariwal block, 12.9 km from it and 22.6 km from Gurdaspur on Batala- Gurdaspur highway. The village is built on top of a mound of 2 m and an old mosque with bricks measuring 9x16.5 x 3 cm was found (see Appendix A, 115, p 273). It is in ruins. No pottery was found here.

**143. Theh Mundian:** 32.10631, 75.41167

It is located in Dinanagar block on the Gurdaspur- Behrampur road, south of Behranpur. It's a small mound with pottery scattered but no sherds could be used for analysis. A medieval structure is built on top (see Appendix A, 116, p 274).

**144. Vero Nangal:** 31.70877, 75.23921

It is in Batala block, 13.4 km from it and 45.6km from Gurdaspur on the Beas- Batala road. It is 3.3 km southwest of Chaudhariwal. Located at an elevation of 246 m, the site spans 0.8 ha

with a mound height of 2 m. The soil is alluvial, and most of the mound has been levelled (see Appendix A, 117, p 274). Early medieval pottery was found.

**145. Wadala Bangar:** 31.95829, 75.15887

The village is in Kalanaur block, 6.9 km south of it and 32.1 km from Gurdaspur. The village can be reached from the Batala- Kalanaur road. The site is 600 m north of the village and Gurdwara Bauli Sahib is built on top. Positioned at an elevation of 248 m, the site covers 1.2 ha with a mound height of 3 m. The soil is a mix, and the mound is partly intact. Early medieval pot sherds were found here. The site is 3.7 km west of Kala Gorey.

**Figure 3.32:** View of mound at Wadala Bangar

**146. Wadala Granthian:** 31.82034, 75.28950

The village is in Qadian block, at 9.3 km from it and 36.1km from Gurdaspur. The village can be approached from the Batala-Qadian-Harchowal road. The site is located within the village with part of the village built on top of the mound. In the middle of the mound, a Peer Baba is built. Parts of the mound were accessible (see Appendix A, 119, p 275). Situated at an elevation of 256 m, the site spans 2.8 ha with a mound of 6 m. Typical historical and early medieval pottery was found along with a ghat shaped bead. The river Beas is located at 25.6 km to the east.

**147. Warraich:** 31.94842, 75.10594

The village is in Dera Baba Nanak block, on NH 503 D Dera Baba Nanak Road. The village can be approached from Kotli Surat Malhi- Kalanaur road on the right when going northwards.

The site is located 100 m north of the village. Located at an elevation of 245 m, the site covers 1.2 ha with a mound height of 5 m. The soil is alluvial, and houses are built on top with part of the mound exposed. Typical early medieval pottery was found. The modern bank of Ravi can be found at 14.9 km to the northwest. The international border with Pakistan is 11.9 km northwest of the site.

**Figure 3.33:** View of mound at Warraich

In conclusion, the present survey has significantly expanded the archaeological map of the Ravi-Beas Doab, with two hundred and fifty nine sites identified, including one hundred and one previously unreported ones. Through ceramic analysis and structural evidence, a broad cultural sequence from the Early Historic to the Medieval period was established for one hundred and forty seven sites. The absence of Harappan pottery in the present survey, despite its mention in earlier reports, may indicate either inaccuracies in earlier identifications or poor preservation and visibility of such material in the current landscape. Structural remains, particularly those built with lakhori bricks, have provided crucial clues in the absence of diagnostic ceramics, allowing for tentative dating into the Medieval period. By re-evaluating previously reported sites and introducing new data from unexplored areas, this chapter lays the foundation for a more nuanced understanding of settlement dynamics in Punjab across two millennia.
